

LIVE ID VERIFICATION

Automate and Simplify Identity Verification

In the technological development era, companies face risks of data breaches, fraud, and impersonation. At the same time, leading companies in their field, such as PCNC, come to provide the best solutions to face such risks. That's why PCNC offers an advanced live identification service; to professionally assist companies to detect and combat fraud. We do this by using AI, machine learning, and biometrics to automate the identification process, improve corporate conversion rates, comply with AML and KYC regulations, and preventing anyone from doing any operation in the account without authorization from the account holder. All this, by simply extracting information from the Id then sending a definitive yes/no answer to the user in seconds.

Id data extract (OCR): The data is extracted from the identity automatically to verify its authenticity and pre-fill the required data

Similarity check (Face Match): To identify that the person holding the ID and the photo in the ID is the same.

Liveness check: To verify that the person holding the ID is physically present during the transaction.

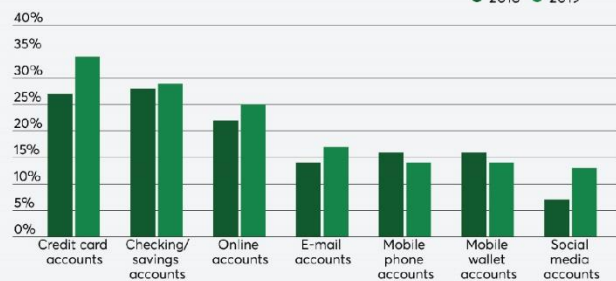

Definitive answer: PCNC Id verification delivers a definitive yes/no answer to users in seconds

Product Highlights

- Instant identity verification through AI, machine learning and biometrics.
- Accurate digital KYC through biometric authentication to confirm the presence of the account holder.
- PCNC's ID verification solution can read the MRZ to extract data from the identity.
- Certified Liveness Detection help detect impersonation by using a selfie for the authorized person's face to prove customer presence.
- PCNC deliver definitive yes/no answer on all identity transactions.
- Expired, blur, and black and white ID detection.

Account takeover fraud favors credit, online

Face Match

Driver License Front

Similarity Check

ID photo matches the user's selfie.

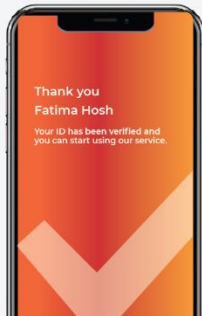

Validity Check

The selfie is real

- ✔ Not taken from the Id.
- ✔ Not the ID photo.
- ✔ Not a picture from a screen, video or paper.
- ✔ Original face with no filter.
- ✔ An acceptable range of age difference.
- ✔ Visible and clear face.

Liveness Check

Certified Liveness Check

Perform liveness and anti-spoofing detection using using advanced face-based biometric technology.

Use Cases

1. Digital account opening
2. Password processing
3. Online customer onboarding
4. Cardholder undetected
5. Money movement tracking
6. Automating business processes
7. compliance to KYC regulations
8. Outdated KBA replacement
9. Age confirmation
10. Fraud detection and combating
11. User verification

More to Appreciate

1. Support of Palestine government-issued IDs
2. ID verification included
3. Supports Arabic and Hebrew characters and documents
4. Customizable to adjust together with your corporate UI/UX
5. Guaranteed fast and secure user experience
6. Customer onboarding acceleration
